LANGUAGES

English - B2/Professional Working Proficiency

Ukrainian - native

PROFILE

Hi, I am Vadym - your full-stack developer!

During my career I have worked with different domains and technologies, worked with agile and scrum methodologies and am always eager to learn new techonologies.
Looking forward to working with you!

WORK EXPERIENCE

DevelopsToday [NDA]   February 2024 - present

- Healthcare App   Feb 2024 - June 2024

Working on that project I developed the front-end app using NextJS and styled the app with MantineDev components. For the back-end we used PostgreSQL and NestJS. The main feature of the app was a friendly user interface that helped medical students share X-ray photos, X-ray data, and other medical info with their teachers. Also, the users were able to leave annotations, small notes, and draw on the pictures so, they will discover how to work with medical equipment outputs.

Tech stack: Next, Nest, MantineDev, PSQL, RestAPI, Jest, Swagger, CornerstoneJS

- AI for dating apps users   June 2024 - Aug 2024

The project is a compilation of the AI written with Python and a bunch of front-end apps written with NextJs. My responsibility were the front-end apps. We used headless components and monorepo structure to reuse code across the apps. I created a lot of new components and developed 8 apps during the project. Also, there was a firebase storage and auth on this project

Tech stack: Next, Shadcn/Radix, TailwindCSS, framer-motion, recharts, Django

- Map data provider   Aug 2024 - present

This project is an automation for the company, that sells the sociology data for businesses. The app involves showing statistics for the selected part of the map, logic to write and draw on the map, a helper that assists and recommends places to open a new business location, and multiplayer logic. My main responsibility is a front-end app written with React. However, I work with the express back-end and AWS cloud structure as well.

Tech stack: React, Express, AWS, GCP, MaterialUI, Mapbox-GL, Zustand, Yjs, Zod

CGS Team

Full-stack intern   Dec , 2023

During the intership, I developed a small Todo application in small terms. Also, the company team did two interviews with candidates.

Radency

Full-stack intern   Aug - Sep, 2023

During the intership, I worked in a medium team with other interns. We had PR reviews from the senior and junior developers. During the internship we developed the booking platform Fyrst and made a live demo of the project.

Quarnuts [NDA]

Front-end developer   Apr - Aug , 2023

Worked in the team with other developers, using HTML/CSS/JS. The project was an automation system for restaraunts.
